Boundless Dreamscape

Fitzroy Street Precinct

Site context & Spatial Quality

The site has rich vegetation and a variety of spaces, but the spaces lack coordination and maintenance.

★★★☆☆ Acceptable

1. Passage Space:
The sandy road is not conducive to walking, but the large trees can provide shade.
Paving

★★★★☆ Comfortable

2. Passage Space:
Asphalt running track with abundant trees along the road.
Tree size

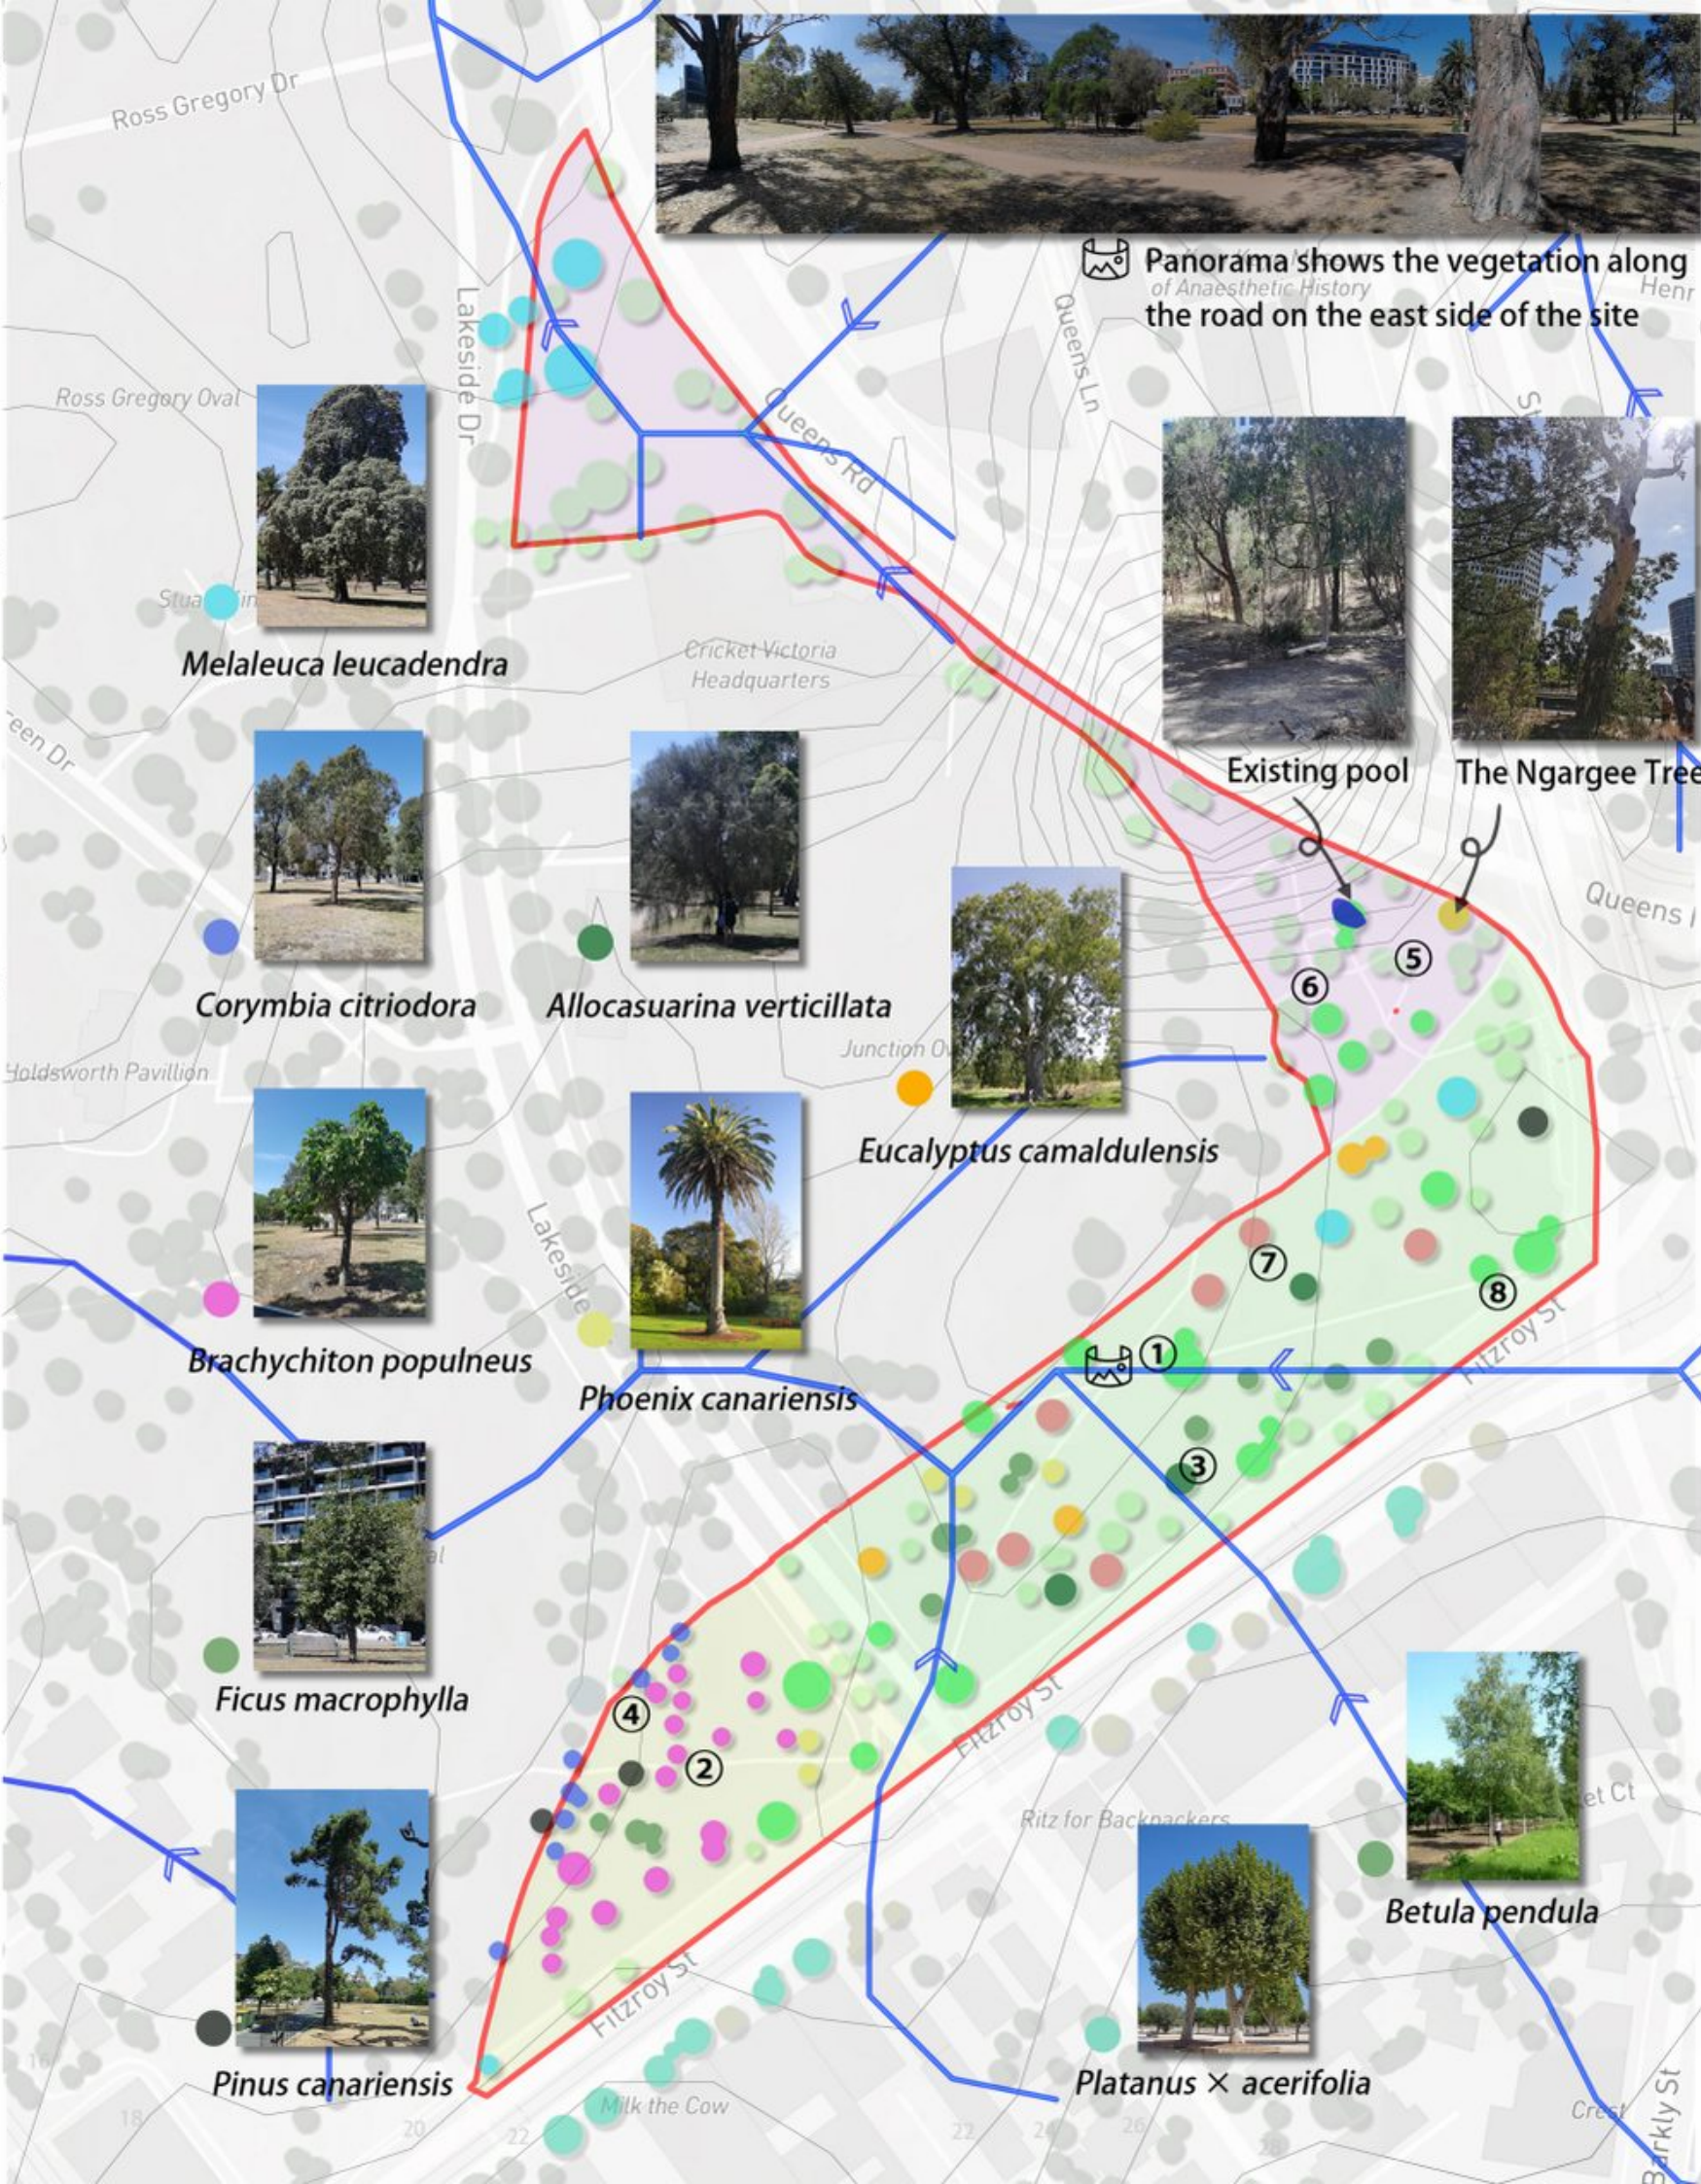

★★★★★ Enjoyable

3. Rest Space:
Single-tree shade with high branching points and large tree.

★★★☆☆ Tolerable

4. Rest Space:
Open Oval area with expansive views under tree canopies shade.
Seat Position

Panorama shows the vegetation along the road on the east side of the site

★★★★☆ Comfortable

5. Nodes:
Open roadways interspersed with dense tree clusters.
Lack of guidance

★★★☆☆ Acceptable

6. Rest Space:
Coastal-style seating lounge.
Lack of maintenance

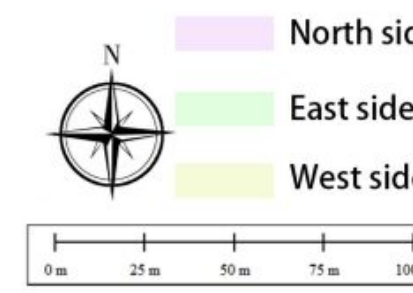

★★☆☆☆ Tolerable

7. Rest Space:
Spacious seating arrangements.
Lack of interaction

★★★★☆ Comfortable

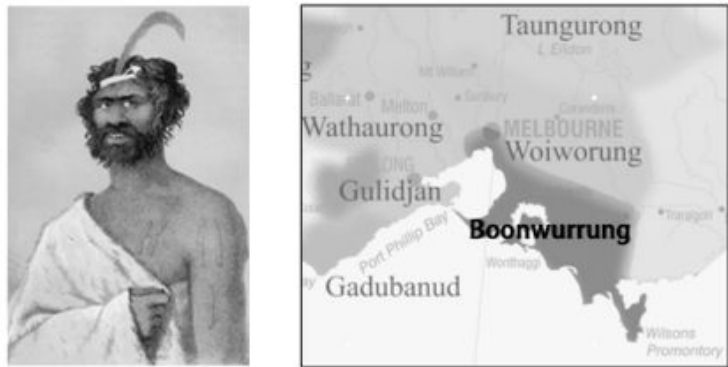

8. Passage Space:
The entrance has a wide view and a height difference.
Lack of features

Fitzroy Street Precinct

Boonwurrung Culture and History

The Boonwurrung are one of the five language groups within the Kulin Nation of south - eastern Australia. They have inhabited a coastal region in what is now Victoria for tens of thousands of years.

Bundjil The all-creator in Boonwurrung belief

Ngargee Means 'Ceremony' in the language of the Boonwurrung

Tens of Thousands of Years Ago

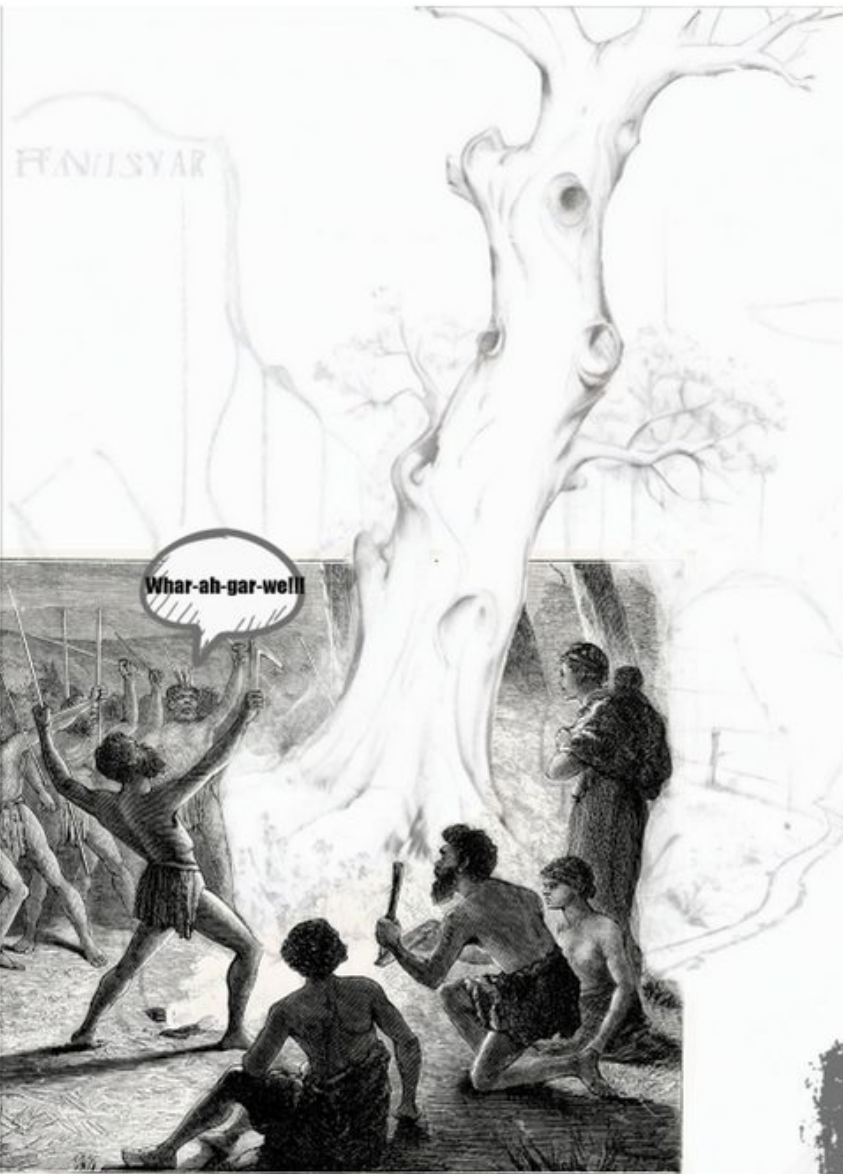

Pre-colonial:

Long inhabited by the Wurundjeri people, with key ceremonial sites.

Murnong (*Microseris lanceolata*)

was a staple food for the Boonwurrung people. Traditionally harvested by women, its nutritious tubers were vital to their diet. More than just food, Murnong symbolized a deep connection to land and sustainable living.

1839

Early Colonial:

Seaside village for Melbourne' s early elite.

The 'Singapore cottages' (1852)

Tropical timbers

The Palais Theatre (1927)

Corrugated iron

The Christ Church complex (1854)

Sandstone

The Housing Commission of Victoria (1938)

Reinforced concrete

Victorian:

Gold boom spurred grand Victorian development.

1850s

1880s

Art Deco:

Entertainment hotspot with theatres and nightlife.

1910s

1940s

Federation:

Federation pride shaped suburban identity.

Modernist:

Postwar change, decline, and urban diversity.

The Esplanade Hotel (1878)

Plasterwork

The St Kilda Public Library (1972)

Glass

The St Kilda Park Primary School (1882)

Polychrome brickwork

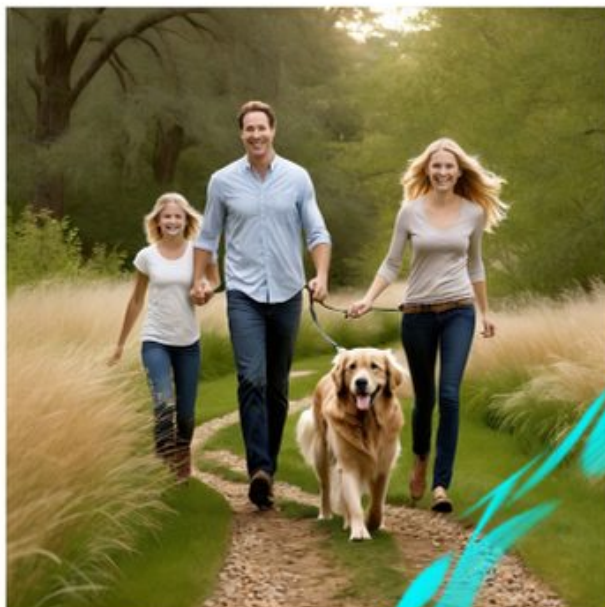

1855 James Kearney Maps includes the St Kilda area

Sensory Narrative

Sensory Narrative is used as the core design language to shape the spatial experience. The materials are extracted from the culture of St Kilda. Through the contrast and collision of different materials' texture, hardness, light and shadow, temperature and other properties, visitors are guided to have multi-level emotional resonance and form a potential "spatial story route".

Precedent Analysis

1. Jaddaf Art Park - waiwai

Location: Waterfront of Dubai Creek, adjacent to an arts centre.

Design Concept: Unfenced public space promoting social interaction through art.

The park is dominated by streamlined hardscapes, a borderless space built to bring together a rich and diverse cultural community. It introduces many sculptures and facilities that attract visitors, including an amphitheater with 200 seats, a children’s sand pool playground, a food stall area shaded by umbrellas, and board game tables.

Geometry & Multiple facilities
Gather visitors

Combination of multiple paving
The circles intersect to form different spaces

Vegetation garden in the overlap
Multi-layered benches
Various ways to relax

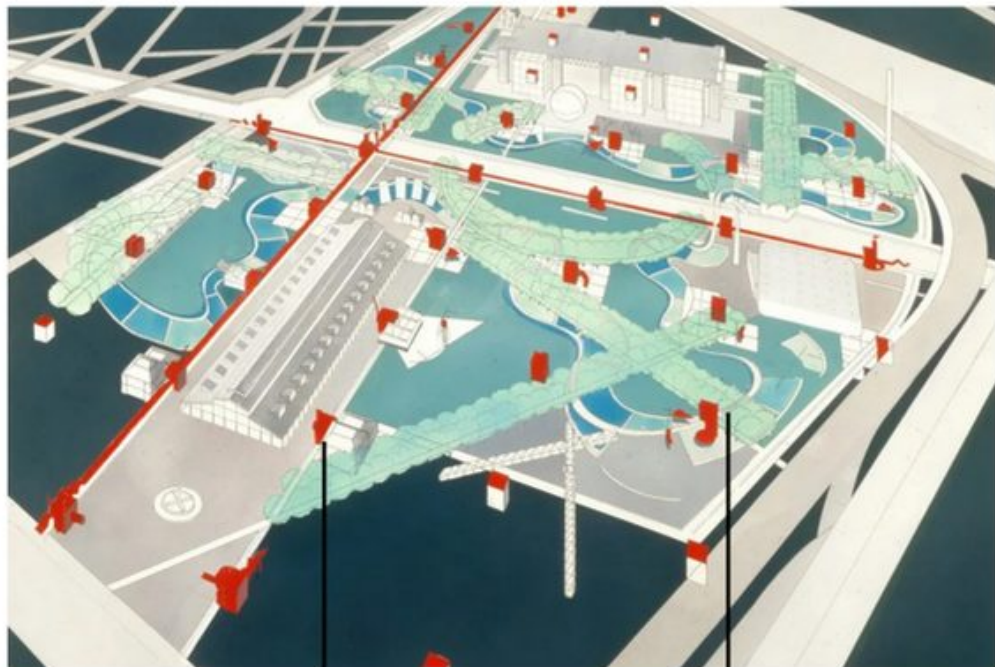

2. Parc de la Villette - Tschumi

Location: Northern Paris, the former site of the Parisian slaughterhouses and wholesale meat market.

Design Concept: Creating unlimited places for activity and interaction through structuralism.

Tschumi designed the park as a deconstructivist building, breaking down a single building into 35 “building fragments” arranged in a grid, intentionally breaking away from the traditional interpretation of a park as an orderly leisure space, enhancing the sense of imperfection and chaos, giving the park a unique personality, and removing the boundaries that restrict visitors, allowing people to use the park in their own way.

Deconstructing & Undefined
break the limits

Building fragments increases disorder
Incoherence and decentralization

Undefined space
Visitors spontaneously interact with the space
The functional structure serves as a cafe, ticket office, observatory and concert hall

Boundless Dreamscape

Fitzroy Street Precinct

Master Plan

1. ConchCove Floral Strip

Evokes seaside romance with sculptural seashells and coastal garden.

2. SereniLoops Rest Hub

Layered circular seating provides visitors with a variety of social and resting spaces.

3. CircleNest Playland

A whimsical kids' zone where concentric circles spark endless adventures.

Oculus Canopy

The convergence of light, water, music, rock, and humanity - all elements united.

Terrafusion

A narrative interwoven with light, shadow, and materials.

4. F1 Pet Speedway

Merges Formula 1 adrenaline with pet-friendly agility challenges.

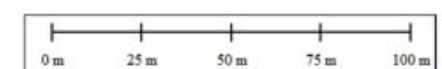

5. BubbleWave Eco-Basin

A playful nod to water elements and ecological harmony.

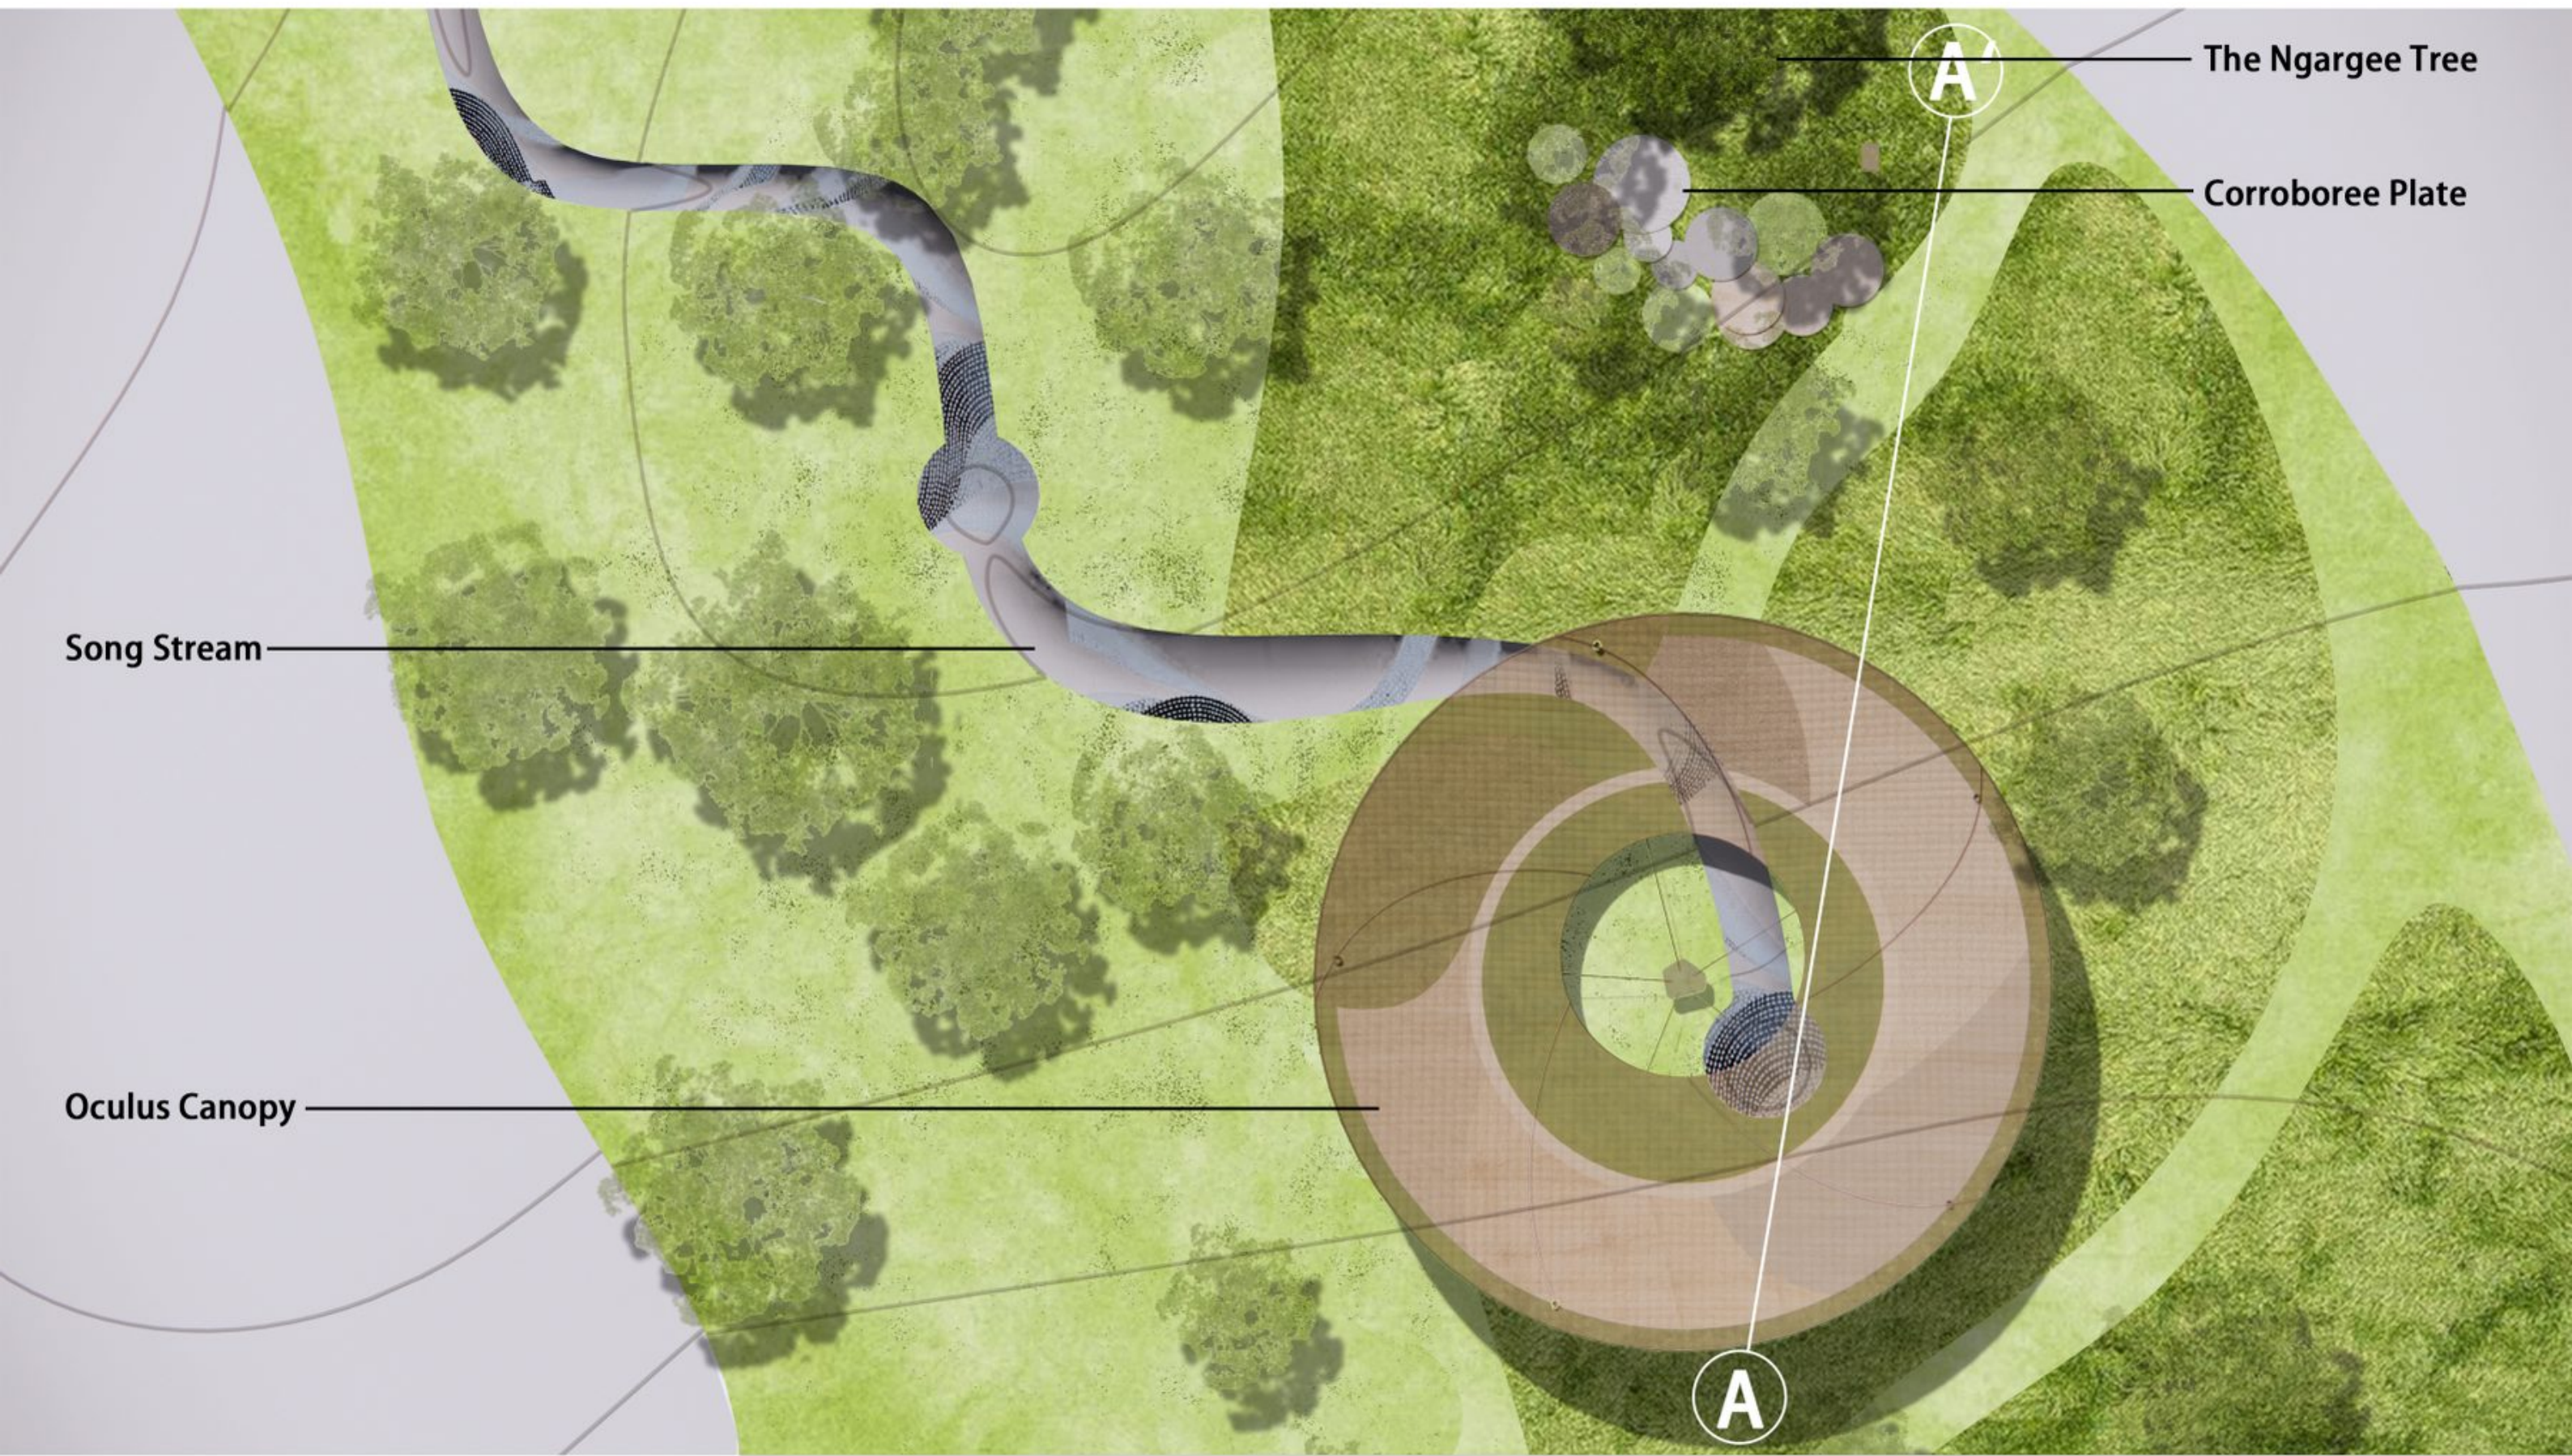

6. EucaLerp Honey Caf é

Blends eucalyptus, lerp, and caf é vibes for a nature-inspired brew spot.

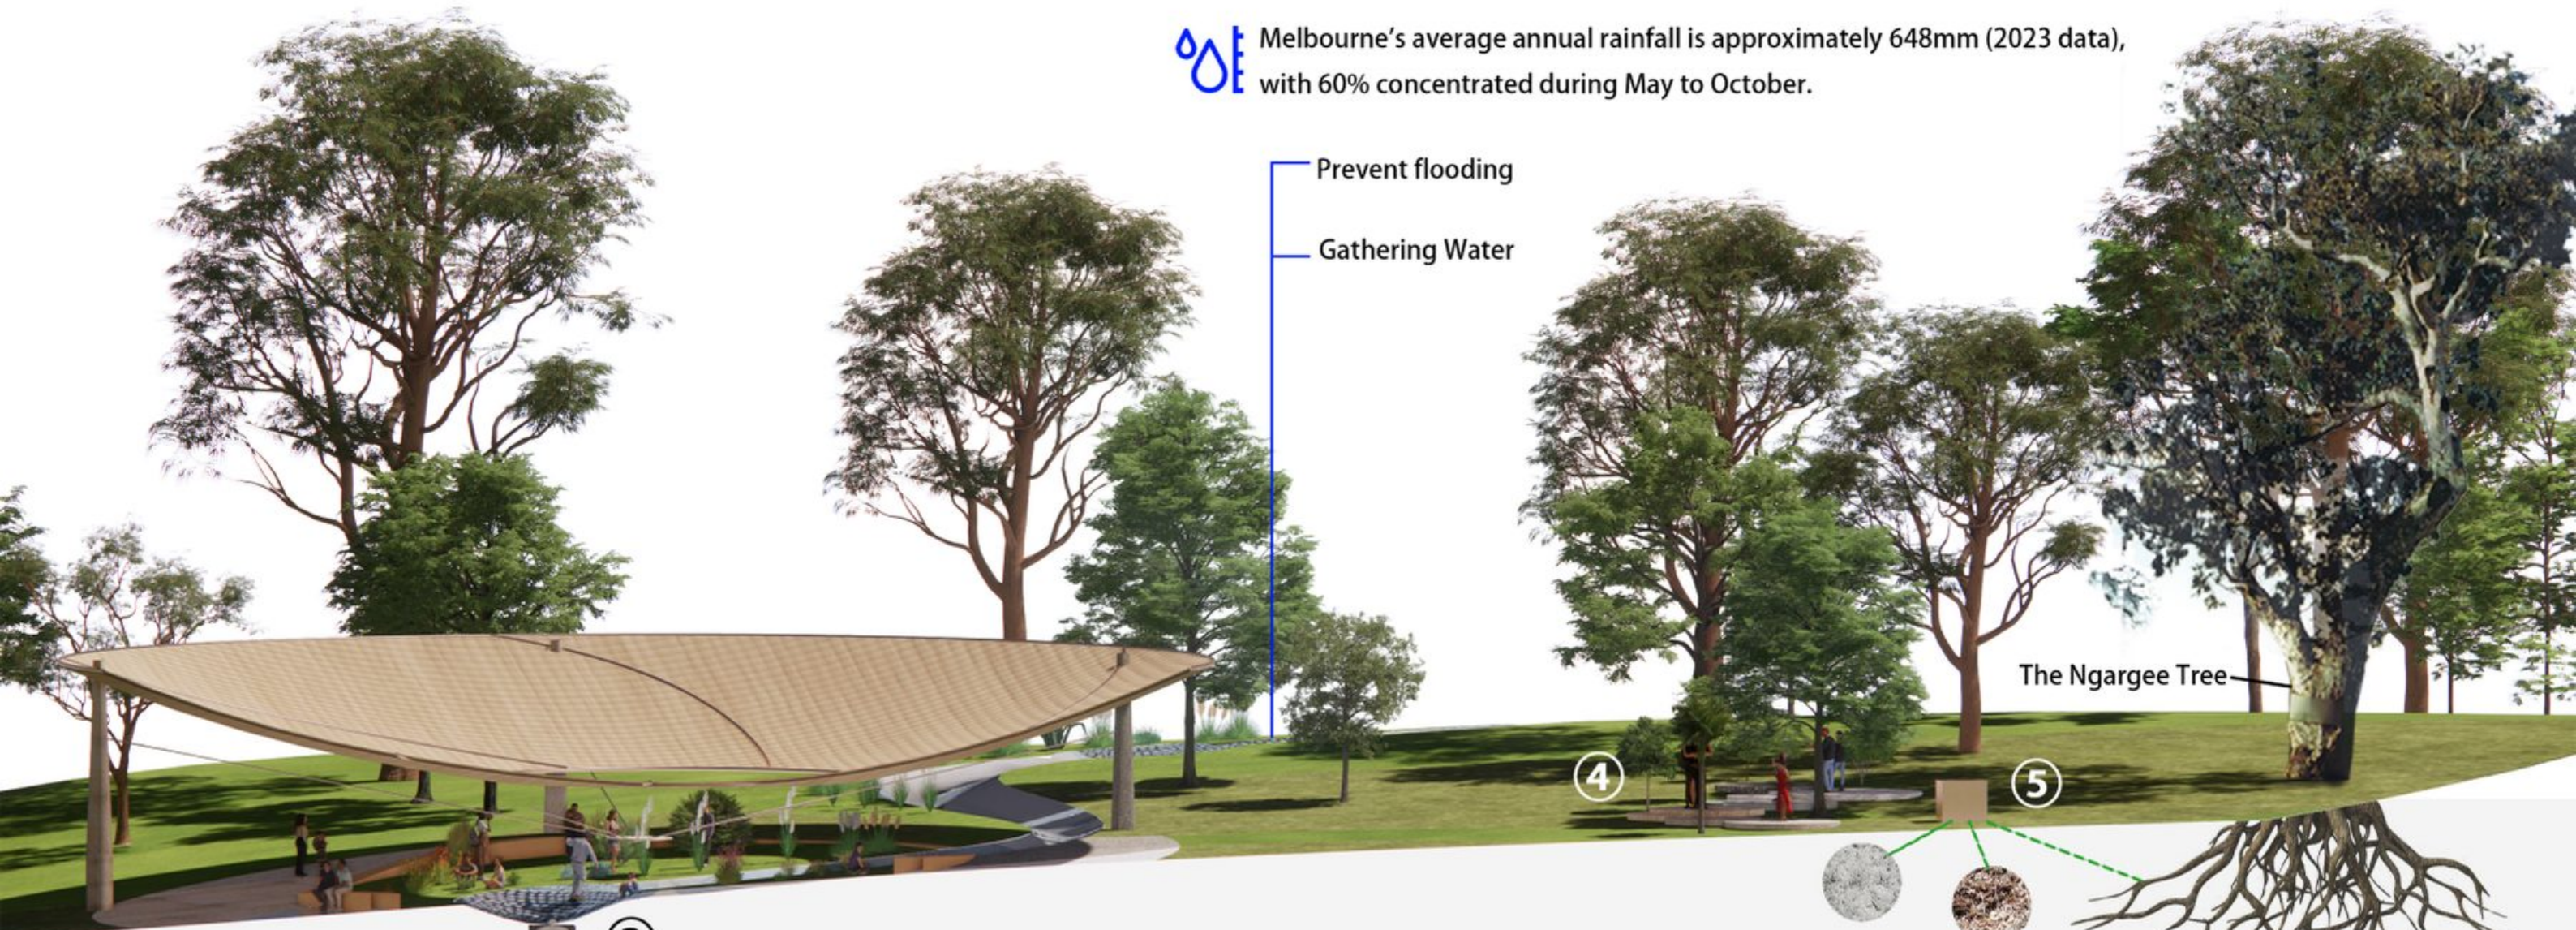

Detail Plan of Oculus Canopy

The Oculus Canopy is a pavilion that converges light, rocks, earth, plants, water, sound, and visitors. Visitors can explore the gardens and pools within the pavilion. The stream channels do not regularly hold water but serve to channel nearby water underground. Constructed next to The Ngargee Tree are tiered rock plates, sized to accommodate a person lying down or to host a corroboree.

Sectional of Oculus Canopy (AA')

Melbourne's average annual rainfall is approximately 648mm (2023 data), with 60% concentrated during May to October.

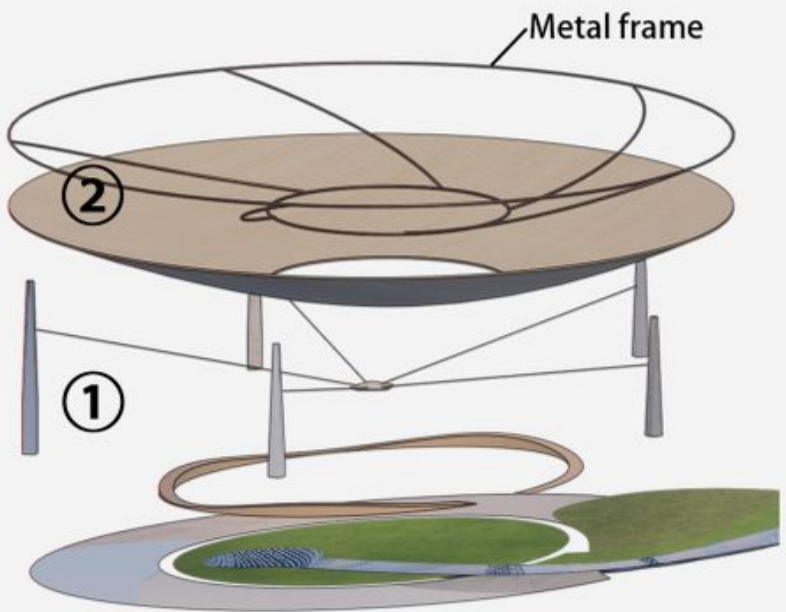

Water pipe

③

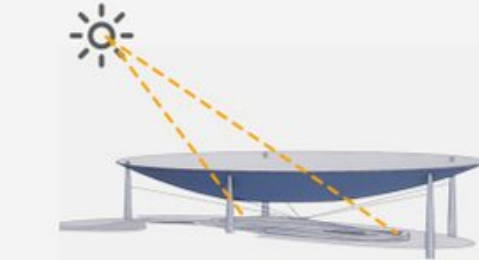

- 1. Pillars & Paving - Soil Convergence
- 2. Canvas texture ceiling - Sunlight Convergence

4. Corroboree Circle

A Pavilion Where Everything Converge

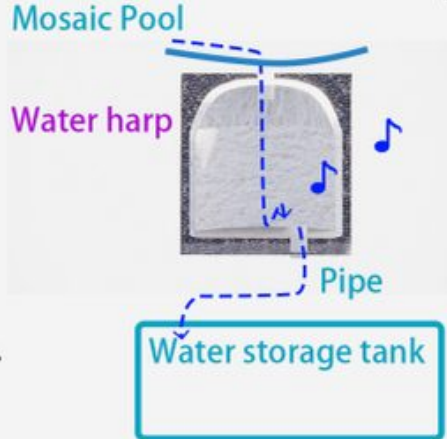

The material of the 5 columns corresponds to the distribution locations of rocks in Melbourne.

At noon during the **Stkilda Festival**, the sunlight fully bathes the garden.

- 3. Ring seats & Mosaic pool - Water Convergence

Water droplets converge to create **music**.
Rainwater is converged and collected to prevent flooding.

- 5. Tree Health Monitoring System

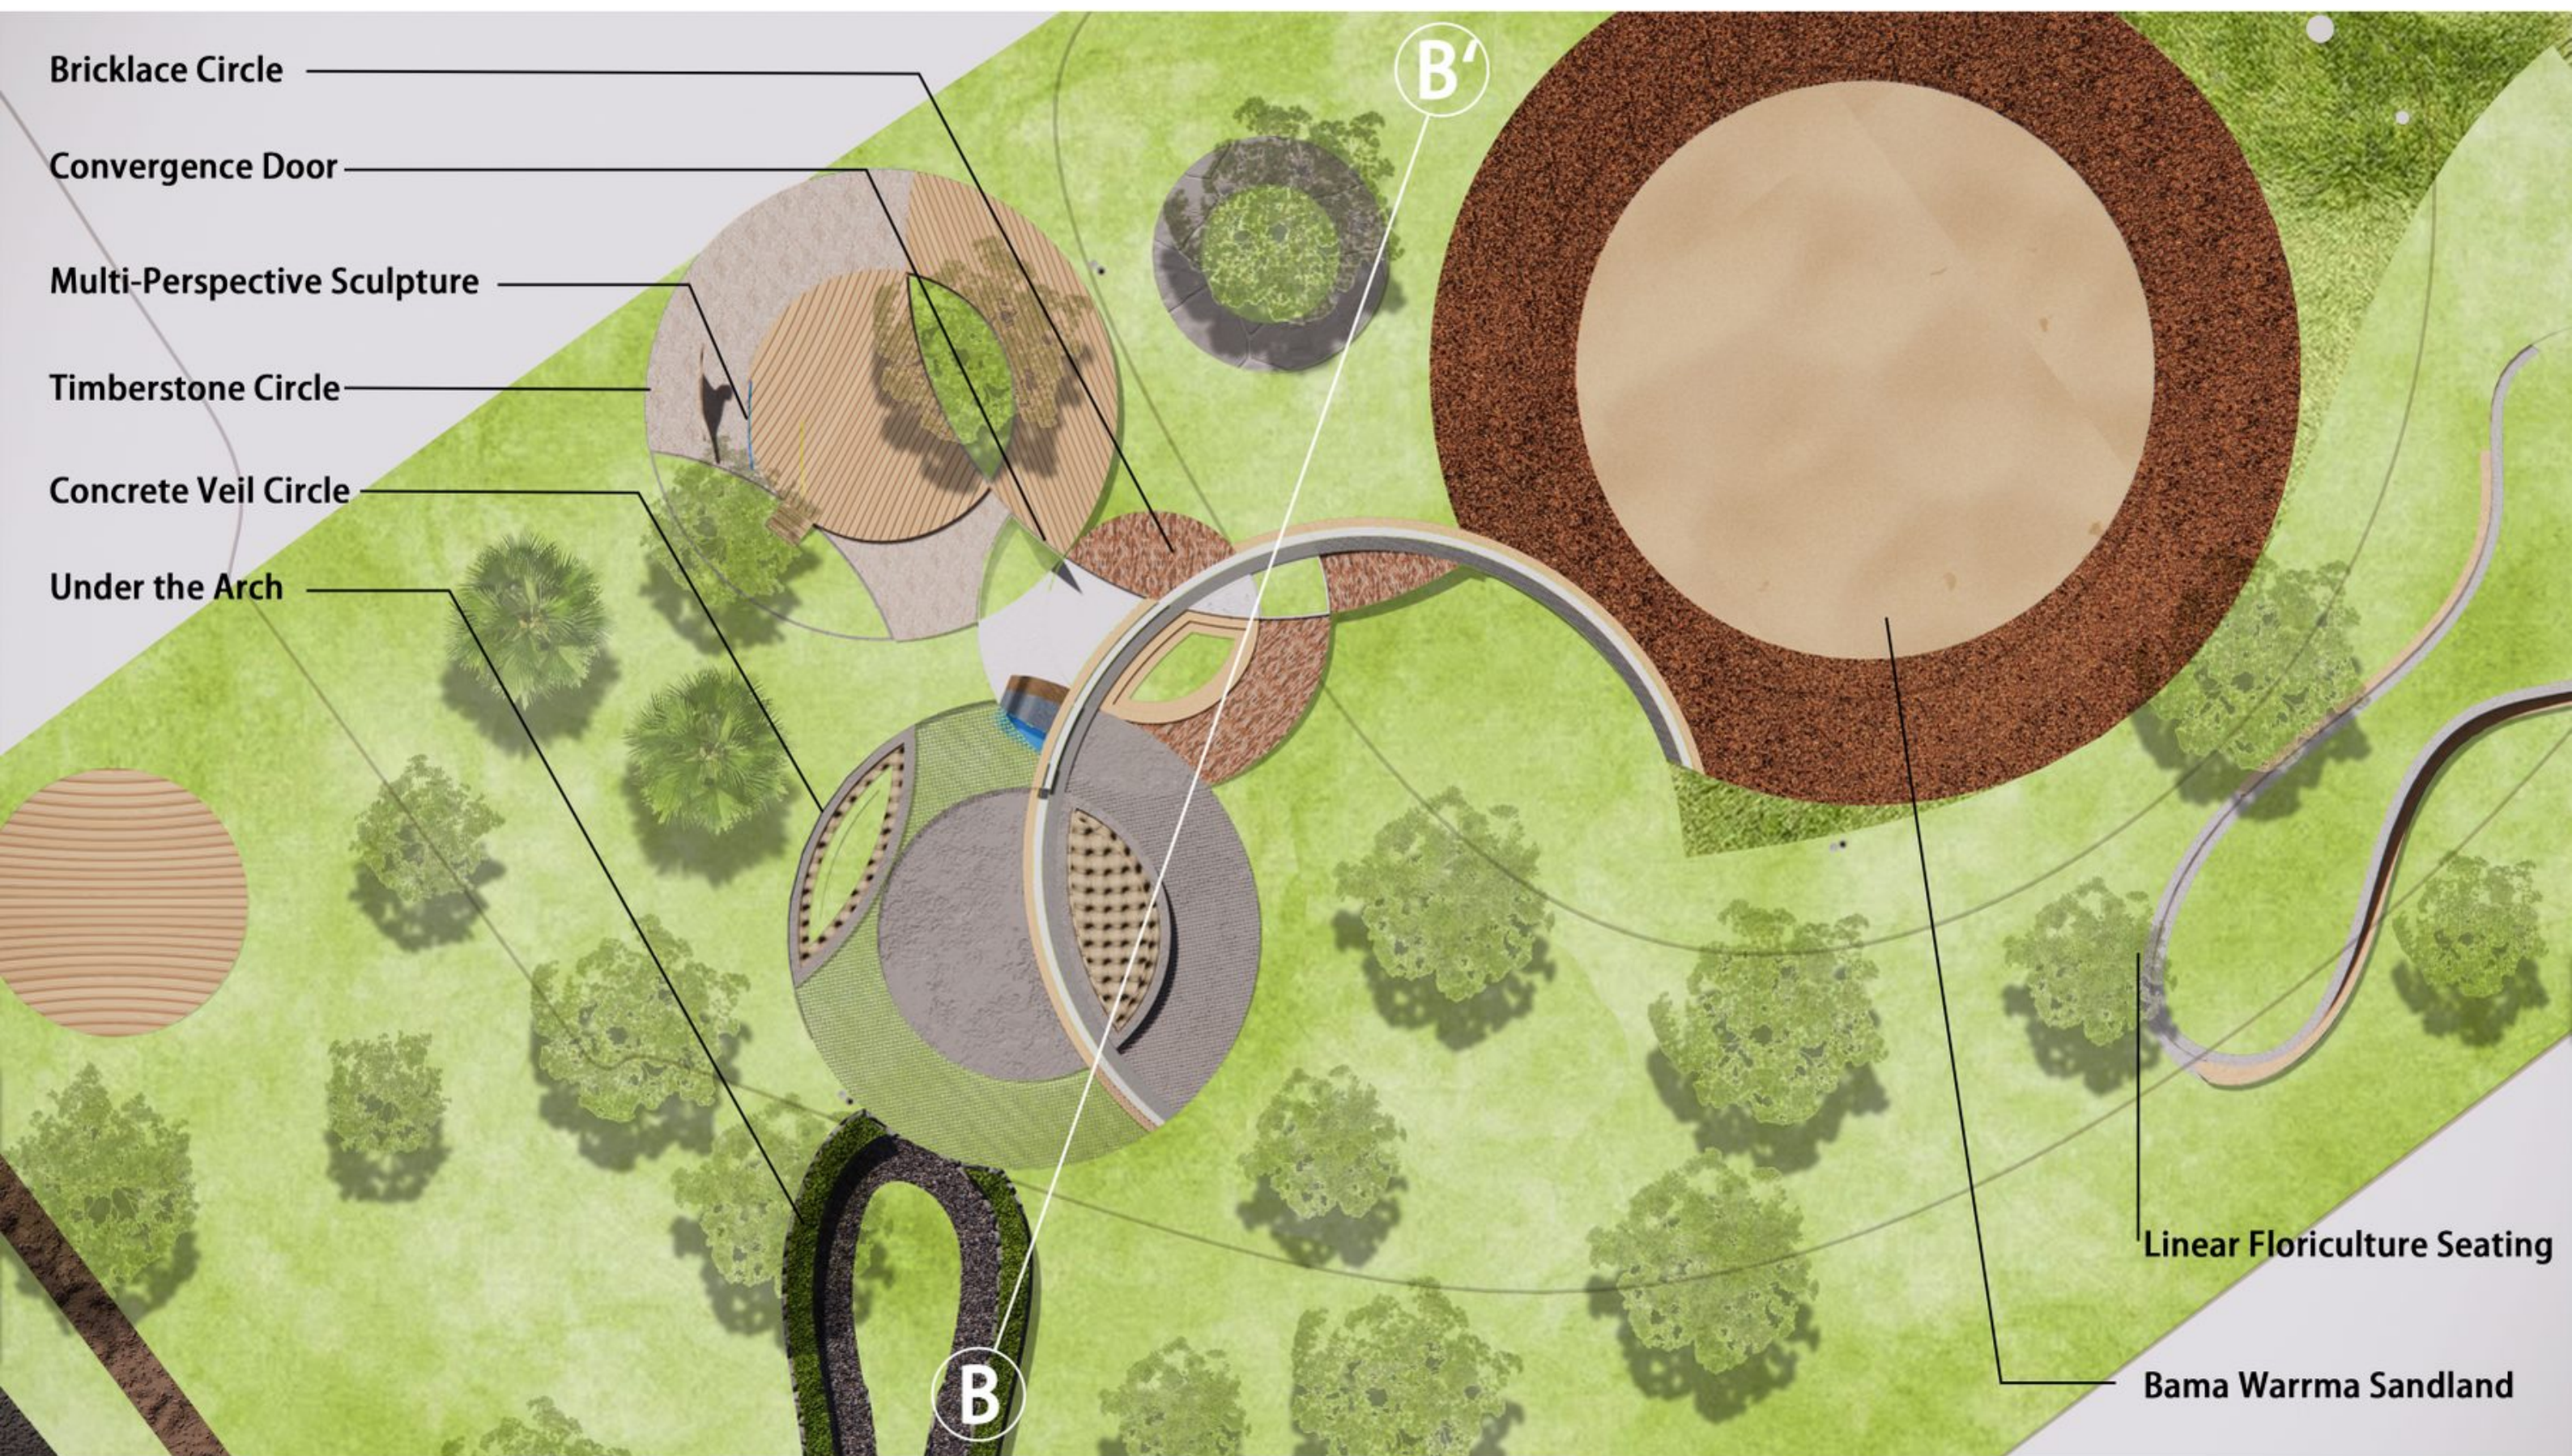

Soil Sensors
Moisture & nutrient detection
pH & temperature monitoring
Biochemical Analysis
Root exudate sensors

Rendering of Oculus Canopy

Sunlight reflected off the pool materials creates ripples of light on the canvas canopy overhead, while the central hovering stone slab is extracted from the rock underfoot.

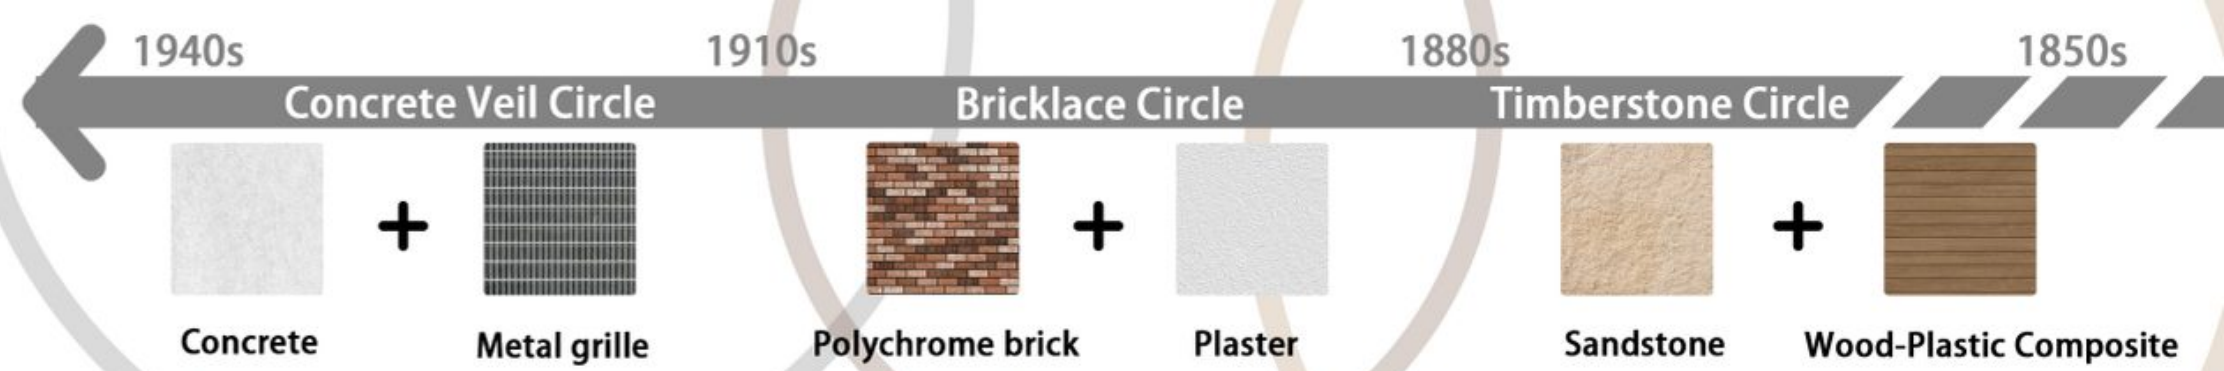

Detail Plan of Terrafusion

The site creates vibrant zones through overlapping circular rings, concealing rich narratives. Visitors can encounter surprises and discoveries by exploring and interacting with the facilities, experiencing diverse materials, experimenting with varied resting postures, and even discovering secret underground rendezvous. The space preserves a sandy area designated for festive dances while maintaining the capacity to host large-scale events.

Sectional of Terrafusion (BB')

Representative materials from St Kilda's history are used in overlapping rings to form characteristic spaces.

1. Under the Arch

Private Space

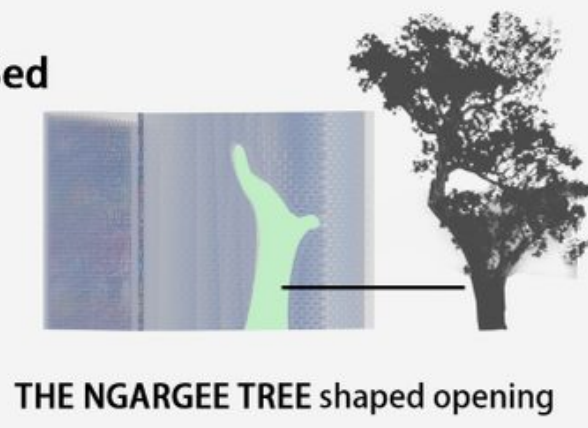

2. Outdoor Colossal Sleep Bed

Open rest space

3. Convergence Door

ONE side is covered in graffiti, leaving THREE sides for artists.

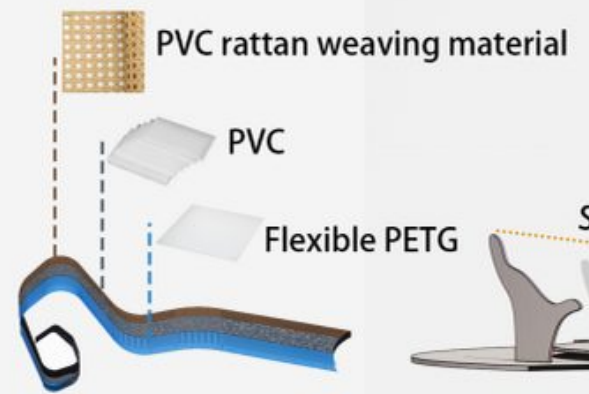

THE NGARGEETREE shaped opening

Exploration rest space

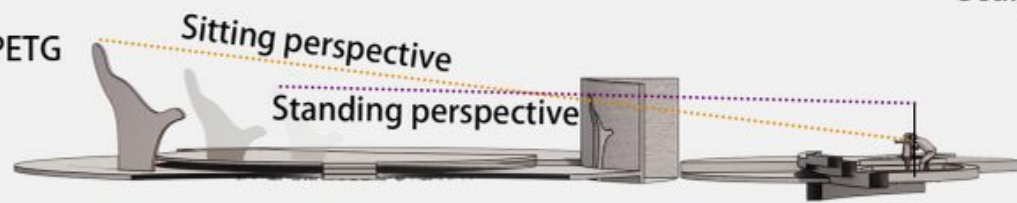

4. Wave shaped Ergonomic Chair

Exploration Activity Space

5. Multi-Perspective Sculpture

Stand, sit, lie down , seeing DIFFERENT sculptures

Memorial Narrative Space

6. Botanical Legacy

Sculpture and Flower Bed of MURNONG

Rendering of Terrafusion

The resilient texture of the metal grille beneath visitors' feet contrasts with the solid concrete, while nestled within this rigid structure lies a soft and comfortable sleep bed.

Statement and Reference

The site embraces diverse cultures, like pigments gathering on a canvas and dripping onto a map. The design draws inspiration from theories of geometry and deconstructivism.

Geometry is reflected in the landscape forms, using circles as functional spots instead of traditional functional zones. The overlapping of circles creates unique spaces, designed to serve various aspects of human sociability—such as rest, social interaction, sports, pets, privacy, exploration, and remembrance.

Deconstructivism is expressed through material use, adopting a narrative approach in time and space. The temporal narrative extracts historically representative building materials from St Kilda, allowing them to collide and overlap to tell stories and evoke diverse visitor experiences. The spatial narrative draws from geographically iconic rock types of Melbourne, bringing them together into a single structure.

The site breaks free from the constraints of roads, and the narrative of functional spots forms potential touring routes. Each functional spot holds surprises for visitors to discover, establishing connections across the site through sightlines and hidden pathways; telling stories through the play of light and shadow over time; creating calm through music made by falling water droplets; and narrating the story of bubbles through paving arrangements...

The vegetation largely preserves the site's original diversity. Special gardens are built within certain functional spots, such as a coastal garden and an indigenous garden. Special attention is given to Murnong, which deserves to be remembered.
