

STEP 1 Equity-oriented → focuses on social demand

Step 1 → Step 2 Spatial Targeting  
Identifies key communities within the broad equity-driven areas where populations are truly concentrated and socially vulnerable. This step avoids spatial averaging and ensures that subsequent analyses focus on locations with strong social relevance and genuine intervention needs.

Step 2 → Step 3 Equity Weighting  
Assigns greater weights to areas with larger and more vulnerable populations in the final prioritization score, so that socially fragile and densely populated zones receive higher restoration priority.

STEP 3 Priority Score for Area Selection

PRIORITY SCORE

KEY ADVANTAGES OF THE MAP-FIRST APPROACH

CROSS-BOUNDARY CONTINUITY  
Captures socially vulnerable and ecologically important zones that span multiple LGAs, reflecting real spatial continuity rather than administrative borders limits.

REGIONAL COMPARABILITY  
Evaluates all SAI units under a unified framework, enabling direct comparison of priority levels across different LGAs.

INTEGRATED SOCIAL-ECOLOGICAL VISION  
Aligns social demand with ecological feasibility before administrative filtering, supporting holistic and sustainable regional planning.

STRATEGIC POLICY GUIDANCE  
Identifies which LGAs collectively contain the highest-priority areas, providing a clear basis for coordinated and cross-jurisdictional decision-making.

STEP 2 Ecology-oriented → focuses on ecological capacity

WEIGHTING SCHEMA

STEP 4 Characteristics of Selected Areas within LGAs

Ecological Connectivity

The green corridor located along the boundary enhances landscape continuity between the northern and southern LGAs, supporting species movement and ecological restoration potential in both Fawkner and Pascoe Vale.

Because the corridor crosses administrative borders, joint planning between LGAs is essential. Coordinated restoration and maintenance can prevent fragmented management and ensure fair access to shared ecological resources.

Equity

A dividing line can be drawn within the LGA, revealing a significant disparity in equity between its northern and southern sides.

The north shows high social demand but weaker ecological conditions, while the south enjoys stronger ecological quality but lower social need.

Achieving ecological equity therefore requires redistributing green infrastructure investment northward and promoting cross-boundary coordination to ensure that all communities benefit equally from ecological and social restoration efforts.

Step 5 FOI Profile

Step 6 Cross-analysis

| Category                 | SA1 21003123724 | Overall N Area | SA1 21003123724                                       |
|--------------------------|-----------------|----------------|-------------------------------------------------------|
| Median age               | 34              | 35             | A relatively younger population                       |
| Children (0-14 yrs)      | 25.00%          | 20.10%         | Many young families                                   |
| Elderly (65+ yrs)        | 13.00%          | 15.80%         | Fewer elderly residents                               |
| Average household size   | 3.5             | 3.5            | Larger families or multi-generational households      |
| Median household income  | 1397            | 1493           | Lower socioeconomic status                            |
| Bachelor+ education      | 0.21            | 0.22           | Limited access to or attainment of tertiary education |
| Overseas-born residents  | 0.63            | 0.62           | Moderate cultural diversity                           |
| People with disabilities | 8.50%           | 10.40%         | Higher need for accessibility services                |

Young Families, Larger Households, Lower Income, Lower Educational Attainment, Moderate Cultural Diversity, Higher Disability Rate

| Category                 | SA1 21003153819 | Overall S Area | SA1 21003153819                        |
|--------------------------|-----------------|----------------|----------------------------------------|
| Median age               | 38              | 39.5           | An older population                    |
| Children (0-14 yrs)      | 16.00%          | 19.00%         | Fewer young children                   |
| Elderly (65+ yrs)        | 21.00%          | 11.60%         | An ageing population                   |
| Average household size   | 2.7             | 2.8            | Smaller households                     |
| Median household income  | 1998            | 1974           | Higher socioeconomic status            |
| Bachelor+ education      | 0.44            | 0.43           | High educational attainment            |
| Overseas-born residents  | 0.3             | 0.3            | A less diverse population              |
| People with disabilities | 5.20%           | 6.50%          | Fewer residents requiring disabilities |

Ageing Population, Highly Educated, Affluent, Smaller Households, Low Cultural Diversity, Lower Disability Rate

**STREET-CORNER RESTING**  
Narrow verge strips: turf and scattered trees, often buffer zones beside traffic.

Improve safety with fences or planting buffers for children  
Ensure paths are wheelchair/pram accessible  
Add shaded seating for caregivers  
Install inclusive play elements

**ROADSIDE GREENS**  
Narrow verge strips: turf and scattered trees, often buffer zones beside traffic.

Enhance visibility and identity to reduce perception of neglect  
Add interactive planting for children  
Improve connectivity and continuity for walking  
Promote shared backyard spaces or semi-public courtyards

**PRIVATE GREENS**  
Small backyards with paved surfaces: used for drying, storage, or family gathering; high enclosure walls.

Support multi-use functions like drying, play, and social gathering  
Replace paved surfaces with greener, cooler groundcovers

**PARKS / RESERVES**  
Small fenced playgrounds: simple play sets, little shade, minimal seating.

Increase shade and water access for summer use  
Provide inclusive facilities  
Add picnic shelters or family gathering spots

**STREET-CORNER RESTING**  
Street corners lack resting amenities and proper lighting.

Thermal comfort & access: shaded seating  
Maintain low-traffic and quiet character  
Gentle activity: low-impact exercise stations  
Provide benches with backrests and armrests for older adults

**ROADSIDE GREENS**  
Street trees have limited canopy cover and are poorly maintained, failing to create a continuous shaded corridor.

Maintain shaded pedestrian walkability  
Add subtle lighting for evening walks  
Encourage gentle physical activity  
Improve seasonal aesthetic

**PRIVATE GREENS**  
Large front/back gardens, ornamental, low utilisation.

Replace tall fences with hedges for semi-openness  
Maintain as visual and ecological buffers  
Encourage gardening as a hobby

**PARKS / RESERVES**  
The neighborhood is densely occupied by housing, with a lack of parks.

Build continuous loop paths for walking routines  
Include age-friendly exercise equipment  
Provide shaded resting points and water access  
Add wellness elements

Step 7 Precedent Analysis

**Streets as Shared Spaces (NSW Government)**

Streets as Shared Spaces is an NSW Government program funding councils to turn streets into safer, greener, people-focused places. It supports quick-build projects such as pop-up parks, outdoor seating, shared zones, and widened footpaths to test long-term improvements.

Both precedent and SA1 21003123724 target local, mixed-use streets aiming to **calm traffic, improve walkability, and strengthen neighbourhood identity through low-cost, community-led trials.**

**What to borrow for SA1 21003123724:**

Create low-speed shared streets near schools and shops.

Add pocket social spaces with seating, shade, and lighting.

Apply inclusive design for adults and children, such as barrier-free paths, shaded benches with backrests/armrests, and playful but safe elements.

**Green Your Laneway (City of Melbourne)**

City of Melbourne program converting under-used laneways into small, people-first public spaces.

Typical micro-upgrades: kerbside planters & rain-gardens, lightweight seating/parklets, basic lighting, durable native planting.

Physical fabric: Service lanes and small leftover spaces suit point-scale interventions.

Delivery model: Low-cost, modular, quick-build works that scale point → line → network with community/tenant partners.

Outcomes: Cooler microclimate; safer, more inviting walking links; stronger identity for diverse, family-oriented streets.

**What to borrow for SA1 21003153819:**

WSUD + curb extensions to shorten crossings and calm traffic.

Pocket rest nodes: seating with backrests/armrests, shade, gentle night lighting, near shops/bus stops at 50-70 m intervals.

Time-bound calm streets near shops; simple lighting + wayfinding to knit a laneway network.

In SA1 21003153819, this can be enhanced with more shaded seats for older users, accessible ramps.

Step 8 FOI Design
